

Code of Conduct and Confidentiality Policy

Document ID: POL-COC-001
Owner: Corporate Compliance
Status: Approved
Version: 3.2
Last Updated: 2026-02-10
Applies to: All Employees, All Towers

1. Purpose

This policy defines the standards of professional conduct expected from every employee, and the confidentiality obligations that apply to all client and project information.

2. Confidentiality of Client and Project Information

Every employee handles confidential client data as part of daily work. The following rules are mandatory and have zero exceptions:

1. Never take a photograph, screenshot, or screen recording of any client project, codebase, internal tool, dashboard, or document, for any reason, at any time, on any device.
2. Never share project details, client names, architecture diagrams, credentials, or business logic with anyone outside the assigned project team, including other Capgemini employees not staffed on that project.
3. Never paste client code, client data, or client documents into any external AI tool, public chatbot, translation tool, or personal cloud storage. This includes well-known AI assistants accessed through personal or unapproved accounts.
4. Never discuss client-identifiable details in public spaces, including cafeterias, elevators, shuttles, ride-shares, or social media, even in vague terms.
5. Never store client data on personal devices, personal email, personal USB drives, or personal cloud accounts (Google Drive, Dropbox, iCloud, etc).

6. All client deliverables, source code, and documents remain the exclusive property of the client and Capgemini. Employees retain no rights to reuse this material after leaving the project or the company.

3. Reporting a Suspected Breach

If you suspect a confidentiality breach (your own or someone else's), report it immediately to your Project Manager and to InfoSec at infosec-helpdesk (internal ticketing). Do not attempt to fix or hide the issue yourself. Early reporting is treated very differently from concealment during any subsequent review.

4. Use of AI Tools at Work

1. Only AI tools explicitly approved and provisioned by Capgemini IT may be used on project work.
2. Approved internal AI tools (such as the internal knowledge assistant) operate inside the company security boundary and do not send data outside the organization.
3. Personal accounts on public AI tools (ChatGPT, Claude, Gemini, etc.) must never be used for any task involving client data, source code, architecture details, or internal documents, even if the intention is harmless (e.g., "just to debug a snippet" or "just to summarize a doc").
4. Using personal AI accounts for fully generic, non-project tasks unrelated to any client (e.g., grammar checking your personal resume) is permitted but should still avoid pasting any internal company information.

5. Professional Conduct

1. Treat all colleagues, clients, and vendors with respect regardless of role, seniority, background, or tenure.
2. Harassment, discrimination, or retaliation of any kind is prohibited and can be reported confidentially through the Ethics Helpline.
3. Conflicts of interest (e.g., a family member working at a client or competitor) must be disclosed to your manager and HR.

6. Consequences of Violation

Violations of this policy, particularly confidentiality breaches involving client data or unauthorized AI tool usage, can result in disciplinary action up to and including termination of employment, and may carry personal legal liability depending on the nature of the client contract.

7. Acknowledgement

All employees must acknowledge this policy annually through the HR portal.
New joiners must acknowledge it during Week 1 as part of onboarding.
